

Welcome

Bennu Framework

Bennu is the foundation for building modular Java web applications based on the [fenix-framework](#). It covers the following core features:

- Runtime installation configuration
- Runtime application menu configuration
- User authentication
- Access groups
- Rest server infrastructure
- Transactional IO
- Scheduling system (crontab like configuration)
- Indexing and search
- Theming
- Internationalization

Getting the source code:

Bennu source code is available at our github repository: <https://github.com/FenixEdu/bennu>
